

Consider the 'Bear'...

- Built-in Baffles Divert Solids & Gases Back into Tank
- 'Quiet Zone' Slows Movement of Effluent Allowing Settling to Occur in Tank
- Filter Design Allows Solids to Come in Contact with the Entire Surface Area of the Filter Plates Reducing the Chance of Clogging
- Baffle Walls Create Three (3) Separate Weirs for Enhanced Performance and More Time between Servicing
- Progressively Smaller Filtration Channels – 1st Baffle 3/16", 2nd Baffle 1/8" and 3rd Baffle 1/16" – Extends Service Life by Preventing Particles from Passing from One Baffle to the Next
- Filter Alarm Switch Mount is Molded Internally & Protected from Unfiltered Effluent to Prevent False Alarms
- Sturdy Dual 3/4" PVC Lifting Handles
- Manages Flows to 2,750 Gallons Per Day
- Wisconsin State Approved

*The Bear
ML3-916 Effluent Filter was
Designed by Theo Terry, an Experienced
On-Site Wastewater Treatment Professional
with Multiple Patents for Innovative On-
Site Treatment Products.*
